

Polymer – Extrusion – Pipe and Profile Technology Part 2

Study Mode: | Course Level:

Is this course right for me?

Candidates should have been employed within an extrusion environment for a period of no less than 3 months and have some knowledge of the process requirements or they should have completed our precourse questionnaire and achieved a score of 25% or above. This course is designed to introduce candidates to the fundamental principles associated with running an extrusion line and its downstream equipment and is appropriate to an NVQ Level 2 standard of performance. The course is a blend of theory and practical application sessions to provide a basic understanding of the extrusion process and associated working practices.

Who should attend:

- Operators who could then assist with routine start-up & shut-down
- Production and Product Design or Development Engineers
- Logistics and Procurement staff
- Toolroom and Maintenance personnel

What will I learn?

On completion of the course, the delegates will be able to:

- Identify process hazards, state safety requirements and apply safe working practices
- Start-up and shut-down an extrusion machine safely and efficiently
- Detail the basic construction, control and operation of an extrusion machine
- Identify relevant ancillary equipment and describe its usage
- Describe common die construction principles and simple maintenance procedures
- Describe the nature of plastic materials and list common types and grades
- List common extrusion problems and suggest remedial actions
- State common quality systems, techniques and quality requirements associated with the extrusion process

What skills will I gain?

Polymer Processing Certificate Part 2. Material covered has been aligned to the content of an NVQ at Level 2 and can be used as underpinning knowledge towards achieving the award, if so desired. For Telford course delivery, an additional BTEC award is issued for successful completion at the end of course assessment.

How will I be assessed?

Individual candidate knowledge levels are assessed both pre and post course attendance, after which a management report is provided to help identify any further training requirements or career progression possibilities.
